## Contents

### Invited Presentations

P Automata: Concepts, Results and New Aspects <i>E. Csuhaj-Varjú</i> .....	1
Computational Nature of Processes Induced by Biochemical Reactions <i>A. Ehrenfeucht, G. Rozenberg</i> .....	17
Transition and Halting Modes for Tissue P Systems <i>R. Freund</i> .....	19
Conformon P Systems and Topology of Information Flow <i>P. Frisco</i> .....	31
Formal Verification and Testing Based on P Systems <i>M. Gheorghe, F. Ipate, C. Dragomir</i> .....	33
A Look Back at Some Early Results in Membrane Computing <i>O.H. Ibarra</i> .....	35
From P to MP Systems <i>V. Manca</i> .....	37
Bridging Membrane Computing and Biosemiotics <i>S. Marcus</i> .....	58
Energy-based Models of P Systems <i>G. Mauri, A. Leporati, C. Zandron</i> .....	60
A Computational Complexity Theory in Membrane Computing <i>M.J. Pérez-Jiménez</i> .....	82

### Regular Presentations

Evolving by Maximizing the Number of Rules: Complexity Study <i>O. Agrigoroaiei, G. Ciobanu, A. Resios</i> .....	106
---	-----

Modelling Inflections in Romanian Language by P Systems with String Replication <i>A. Alhazov, E. Boian, S. Cojocaru, Yu. Rogozhin</i> .....	116
On Reversibility and Determinism in P Systems <i>A. Alhazov, K. Morita</i> .....	129
Typed Membrane Systems <i>B. Aman, G. Ciobanu</i> .....	140
A P System Based Model of an Ecosystem of Some Scavenger Birds <i>M. Cardona, M.A. Colomer, A. Margalida, I. Pérez-Hurtado, M.J. Pérez-Jiménez, D. Sanuy</i> .....	153
Metabolic P System Flux Regulation by Artificial Neural Networks <i>A. Castellini, V. Manca, Y. Suzuki</i> .....	169
A Novel Variant of Tissue P Systems for the Modelling of Biochemical Systems <i>P. Cazzaniga, G. Mauri, L. Milanese, E. Mosca, D. Pescini</i> .....	184
Eco-P Colonies <i>L. Cienciala, L. Ciencialová</i> .....	201
Decision Trees for Obtaining Active Rules in Transition P Systems <i>J.A. de Frutos, L. Fernández, F. Arroyo</i> .....	210
Regulation and Covering Problems in MP Systems <i>G. Franco, V. Manca, R. Pagliarini</i> .....	218
Hybrid Transition Modes in (Tissue) P Systems <i>R. Freund, M. Kogler</i> .....	228
An Overview of P-Lingua 2.0 <i>M. García-Quismondo, R. Gutiérrez-Escudero, I. Pérez-Hurtado, M.J. Pérez-Jiménez, A. Riscos-Núñez</i> .....	240
A First Attempt to Model Notch Signalling by Means of P Systems <i>M. García-Quismondo, B.M. Henley, I. Pérez-Hurtado, A. Riscos-Núñez</i> .....	265
Characterizing Tractability by Tissue-Like P Systems <i>R. Gutiérrez-Escudero, M.J. Pérez-Jiménez, M. Rius-Font</i> .....	269
Searching Previous Configurations in Membrane Computing <i>M.A. Gutiérrez-Naranjo, M.J. Pérez-Jiménez</i> .....	282
Modelling Signalling Networks with Incomplete Information about Protein Activation States: A P System Framework of the KaiABC Oscillator <i>T. Hinze, T. Lenser, G. Escuela, I. Heiland, S. Schuster</i> .....	298

Solving NP-complete Problems by Spiking Neural P Systems with Budding Rules <i>T.-O. Ishdorj, A. Leporati, L. Pan, J. Wang</i> .....	317
Tuning P Systems for Solving the Broadcasting Problem <i>R. Lefticaru, F. Ipate, M. Gheorghe, G. Zhang</i> .....	337
An Improved Membrane Algorithm for Solving Time-Frequency Atom Decomposition <i>C. Liu, G. Zhang, H. Liu, M. Gheorghe, F. Ipate</i> .....	355
Simulating Active Membrane Systems Using GPUs <i>M.A. Martínez-del-Amor, I. Pérez-Hurtado, M.J. Pérez-Jiménez, J.M. Cecilia, G.D. Guerrero, J.M. García</i> ....	369
A Region-Oriented Hardware Implementation for Membrane Computing Applications and Its Integration into Reconfig-P <i>V. Nguyen, D. Kearney, G. Gioiosa</i> .....	385
Discovering the Membrane Topology of Hyperdag P Systems <i>R. Nicolescu, M.J. Dinneen, Y.-B. Kim</i> .....	426
Reversible P Systems with Symport/Antiport Rules <i>T.Y. Nishida</i> .....	452
Approaching a Question of Biologically Plausible Applications of Spiking Neural P Systems for an Explanation of Brain Cognitive Functions <i>Adam Obtułowicz</i> .....	461
A Note on Small Universal Spiking Neural P Systems <i>L. Pan, X. Zeng</i> .....	464
On the Power of Computing with Proteins on Membranes <i>P. Sosík, A. Păun, A. Rodríguez-Patón, D. Pérez</i> .....	476
An Efficient Simulation of Polynomial-Space Turing Machines by P Systems with Active Membranes <i>A. Valsecchi, A.E. Porreca, A. Leporati, G. Mauri, C. Zandron</i> ....	489
Look-Ahead Evolution for P Systems <i>S. Verlan</i> .....	507
Spiking Neural P Systems with Weights and Thresholds <i>J. Wang, H.J. Hoogeboom, L. Pan, Gh. Păun</i> .....	514
<b>Late Arrived Papers</b>	
A Note on P Systems with Small-Size Insertion and Deletion <i>A. Alhazov, A. Krassovitskiy, Yu. Rogozhin, S. Verlan</i> .....	534

Could Procaryotic (as Well as Eukaryotic Cells) Provide Software and Hardware for P Systems Based Computers? <i>I.I. Ardelean</i> .....	538
On the Efficiency of Promoters and of Cooperative Rules in P Systems <i>R. Barbuti, A. Maggiolo-Schettini, P. Milazzo, S. Tini</i> .....	543
Power and Size of Generalized Communicating P Systems with Minimal Interaction Rules <i>E. Csuhaj-Varjú, S. Verlan</i> .....	547
Accepting Evolutionary P Systems <i>V. Mitrana, J.M. Sempere</i> .....	552
Uniformity: Uncovering the Frontier of Parallelism <i>N. Murphy, D. Woods</i> .....	556
P Systems with Control Nuclei <i>Gh. Ștefănescu, T. Șerbănuță, C. Chira, G. Roșu</i> .....	561
