Descripción			
<p>Some simulations were producing errors, and some charts were not showing the proper information. These errors were due to some methods not returning the information from the database in the right order. All the detected bugs have been fixed, being available in the current version of MeCoSim. Several more minor changes/improvements have been included.</p> <p>Note: from a technical point of view, it has implied the update of some methods and the inclusion of a new field (paramOrder) in the SQLite inner database, in the table plingua_params, with type INTEGER and default value 1. The new data represents the order of the params definition in the config file.</p>
